

Article 34

## CLAIMS

- 1.(amended) A carrier for electrophotography in which a surface of at least a core material is coated with a resin,  
5            wherein the coating resin contains a fluorine modified silicone resin and an aminosilane coupling agent,  
             wherein the aminosilane coupling agent is included in a range of 5 to 40 weight parts with respect to 100 weight parts of the coating resin, and  
10           wherein the carrier charges a toner negatively.
2.        The carrier for electrophotography according to claim 1,  
             wherein the resin coating layer further comprises conductive microparticles within a range of 1 to 15 weight parts with respect to 100  
15        weight parts of the coating resin.
- 3.(canceled)
4.        The carrier for electrophotography according to claim 1,  
20           wherein the proportion of the coating resin is within a range of 0.1 to 5.0 weight parts with respect to 100 weight parts of the carrier core material.
5.        The carrier for electrophotography according to claim 1,  
25           wherein a releasing agent wax is further added to the toner within a range of 4 to 20 weight parts with respect to 100 weight parts of a binding resin of the toner.
6.        The carrier for electrophotography according to claim 1,

wherein inorganic microparticles with an average particle size of
